

Improving the Quality of Learning: IT based Learning

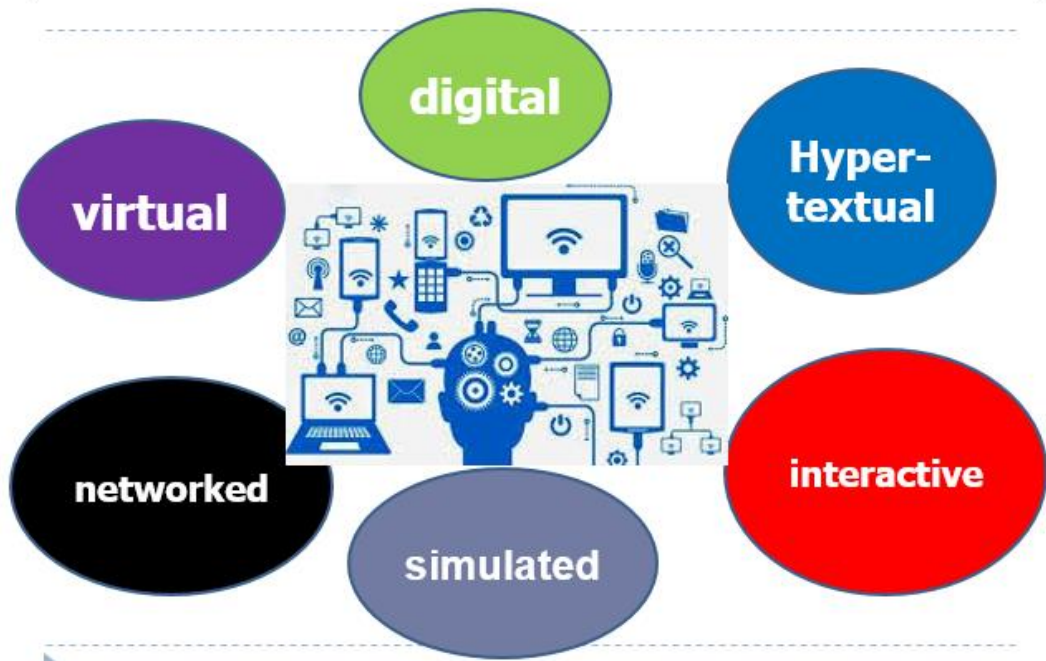

Chai Ching Sing

National Institute of Education, Singapore (NIE)
Corresponding E-mail: chingsing.chai@nie.edu.sg

ABSTRACT

The emergence and advancement of ICT has sparked many calls for reform in education with the promises of improving the quality of learning. A number of 21st century learning frameworks have emerged in respond to the calls. This talk summarizes the common dimensions of 21st century learning and reports several case studies that measured students' perception of some aspects of 21st century learning. Challenges that teachers face in designing and implementing the ICT based lesson; and consequently reflecting and refining the learning packages will be discussed. In sum, our experiences of fostering 21st century quality learning reveal the importance of continuous co-construction of knowledge among teachers and researchers through the full cycle of reflective design and implementation.

Diversified Learning Environment

Top Ranked Trends Across Three NMC Horizon Research Projects

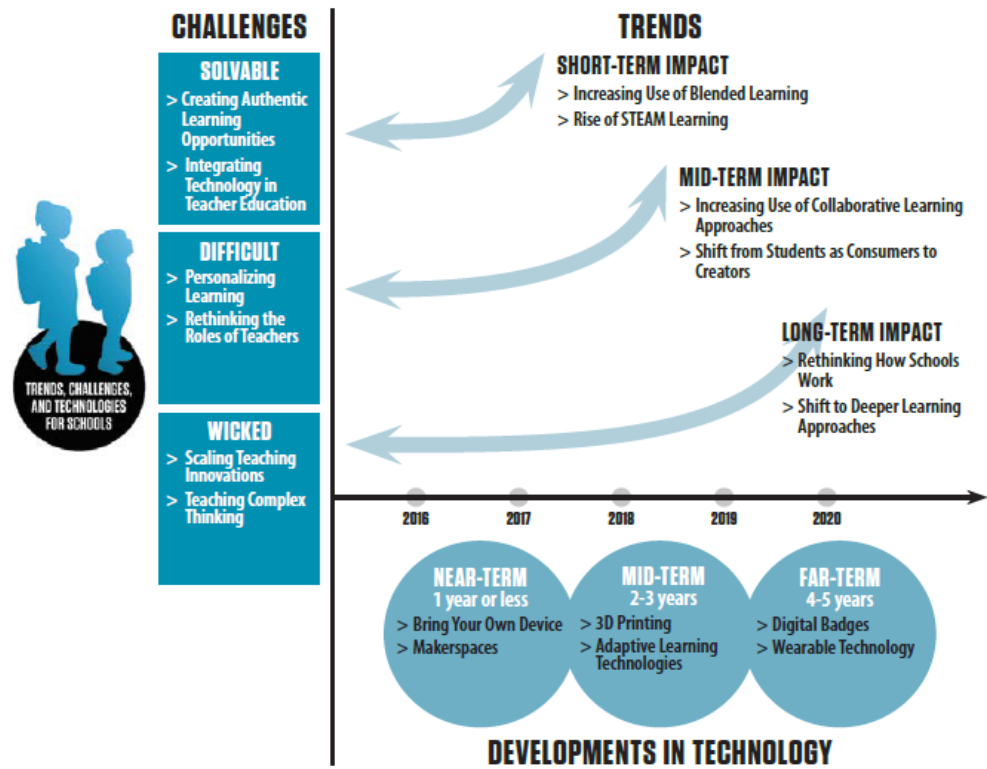

Technology Outlook for Singaporean K-12 Education 2012-2017	NMC Horizon Report 2012 K-12 Edition	Technology Outlook for Australian Tertiary Education 2012-2017
Enhanced electronic books are increasingly being used instead of traditional textbooks.	Paradigms in K-12 teaching are shifting to include online learning, hybrid learning and collaborative models.	People expect to be able to work, learn, and study whenever and wherever they want.
The abundance of resources and relationships made easily accessible via the Internet is increasingly challenging us to revisit our roles as educators.	The abundance of resources and relationships made easily accessible via the Internet is increasingly challenging us to revisit our roles as educators.	Increasingly, students want to use their own technology for learning.
Education paradigms are shifting to include online learning, hybrid learning and collaborative models.	As the cost of technology drops and school districts revise and open up their access policies, it is becoming increasingly common for students to bring their own mobile devices.	Education paradigms are shifting to include online learning, hybrid learning and collaborative models.

MNC Horizon report (2015, K-12)

Two long-term trends: rethinking how schools work in order to bolster student engagement and drive more innovation, as well as shifting to deeper learning approaches, such as project and challenge-based learning.

Bring Your Own Device (BYOD) and makerspaces ...increasingly adopted by schools in one year's time or less to make use of mobile learning and cultivate environments where students take ownership of their education by doing and creating.

Topics from the NMC Horizon Report > 2015 K-12 Edition

Case Studies (Tan, L. ,2009)

Tiffany - The Blog Skin Creator (14 years old). About my interest:

I like to create my own blog skins for fun, using html language and software like Photoshop.

Ronald Toh - The Young Scientist (9 years old) About my interest: I like to read, draw and write about animals and insects. I like creating my own books, cards and games about them. I asked my mom how I could share my works with my friends and she showed me this cool app called Scoop It. You can find out more about it @ <http://www.youtube.com/watch?v=Bnr6QKKcsII>

Amanda Tan - The Fan Fiction Writer (14 years old) The longest fan fiction I have written is about teenage troubles and romance. .. To date, I have written 21 long chapters and I am happy to receive 75 reviews. I am revising Chapter 22 now. Thanks to my reviewers who have given me wonderful ideas to make Chapter 22 even better!

More cases!

- Five stories from Thomas and Brown (2011), NCoL:
- Sam's story, Thomas Douglas lost his students, Googling the error, gaming across generations, diabetes online support
- 13 cases: https://www.ted.com/playlists/129/ted_under_20

Facets	Dominant Way of Learning	Emerging/New Culture of Learning
Assumption of learning	Learning by acquisition	Learning by doing (the participatory culture)
Learning goal	Pre-determined trajectory	Learner-defined trajectory
Technology Use	Use technology for content learning (CAI)	Use technology to learn about, learn to do and to be (Cognitive tools)
Targeted Learner	Focus on the individual (independent learning)	Focus on the individual in the collective (collaborative learning; opportunistic collaboration)
Learning context	Emphasis on formal learning	Emphasis on the fusion of formal and informal learning
Model of accessing information	Push model of accessing information	Pull model of accessing information
Instructional model	Just-in-case instruction	Just-in-time instruction
Curriculum	Prescribed resources and curriculum	DIY media productions/ cognitive artifacts
Modes of meaning-making	Emphasis on language-dominant meaning making	Emphasis on multiple modes of meaning making
Teacher-student relationship	Expert-Novice	Participant-Expert
Literacy model	Knowledge telling model	Progressive knowledge construction
Sites of learning	Classroom as an insular knowledge space	Classroom as a node in the network of knowledge spaces

Measuring 21st century Learning

4P model: Perception, Process, Performance, and Product

What are the major frameworks?

The collage features four main components:

- Framework for 21st Century Learning:** A document with a circular diagram showing '21st Century Student Outcomes' and '21st Century Student Outcomes'.
- enGauge 21st Century Skills:** A document titled 'FOR 21ST CENTURY LEARNERS' with a photo of students at computers.
- Literacy in the Digital Age:** A document with the NCREL and METIRI Group logos.
- Core Values Diagram:** A circular diagram with 'Core Values' at the center, surrounded by 'Responsible Decision-Making', 'Self-Awareness', 'Self-Management', 'Social Awareness', 'Relationship Management', 'Critical and Inventive Thinking', 'Active Contributor', 'Confident Person', 'Self-directed Learner', and 'Global Awareness and Communication Skills'.

Effective teachers model and apply the NETS-S as they design, implement, and assess learning experiences to engage students and improve learning, enrich professional practice, and provide positive models for students, colleagues, and the community. All teachers should meet the following standards and performance indicators.

1. **Facilitate and Inspire Student Learning and Creativity**
Teachers use their knowledge of subject matter, teaching and learning, and technology to facilitate experiences that advance student learning, creativity, and innovation both face-to-face and in virtual environments.
 - a. Promote, support, and model creative and innovative thinking and problem-solving.
 - b. Engage students in exploring real-world issues and solving authentic problems using digital tools and resources.
 - c. Provide student selection using comparable tools, content, and early students' conceptual understanding and thinking, planning, and creative processes.
 - d. Model intellectual curiosity and innovation by engaging in learning with students, colleagues, and others in face-to-face and virtual environments.
2. **Design and Develop Digital Age Learning Experiences and Assessments**
Teachers design, develop, and evaluate authentic learning experiences and assessment incorporating contemporary tools and resources to create content, learning in context and to develop the knowledge, skills, and attitudes specific to the NETS-S.
 - a. Design or adapt relevant learning experiences that incorporate digital tools and resources to promote student learning and creativity.
 - b. Develop technology-enabled learning environments that enable all students to pursue their individual objectives and become active participants in setting their own educational goals, managing their own learning, and assessing their own progress.
 - c. Customize and personalize learning activities to address diverse learner needs using digital tools and resources.
 - d. Provide students with multiple and varied formative and summative assessments aligned with content and technology standards and use resulting data to inform learning and teaching.
3. **Model Digital Age Work and Learning**
Teachers model knowledge, skills, and work practices demonstrating an innovative professional role and digital literacy.
 - a. Demonstrate fluency in technology systems and the Internet in order to model for students the benefits of using technology for research and learning.
 - b. Collaborate with students, peers, parents, and community members using digital tools and resources to support student success and innovation.
 - c. Communicate relevant information and base effectively to students, parents, and peers using a variety of digital age media and formats.
 - d. Model and facilitate effective use of current and emerging digital tools to create, analyze, evaluate, and use information resources to support research and learning.

OECD Education Working Papers
No. 41

21st Century Skills and Competences for New Millennium Learners in OECD Countries

Katerina Ananiadou, Magdalen Claro

Strong agreement among the frameworks on these competencies

- Collaboration
- Communication
- ICT literacy
- Social, cultural skills
- Creativity
- Critical thinking
- Problem-solving
- Self-direction
- Learning to learn
- Etc.

Assessing multidimensional students' perceptions of twenty first-century learning practices

Theoretical support

In particular, Biggs (1987) proposed a theoretical framework to understand student learning which includes the presage-process-product (3P) of learning. This model explore the relationship between the individual characteristics, the teaching and learning context (presage factors), the subsequent learning processes stimulated by the context (process factors), and resulting learning outcomes (product factors) in the classroom.

Item	Factor 1	Factor 2	Factor 3	Factor 4	Factor 5	Factor 6	Factor 7
Factor 1: self-directed learning (SDL), $M = 3.74$, $SD = .89$, $\alpha = 0.88$							
SDL1	0.80						
SDL2	0.76						
SDL3	0.73

QUALITATIVE CONTENT ANALYSIS

Table 6. The distribution of students' notes according to question types and answer levels

View		Category	Frequency (%)
First three months	Question types	Basic information questions	84 (57.1%)
		Wonderment questions	63 (42.9%)
	Answer levels	Level 1	93 (93.9%)
		Level 2	5 (5.1%)
		Level 3	1 (1.0%)
Last three months	Question types	Basic information questions	68 (40.7%)
		Wonderment questions	99 (59.3%)
	Answer levels	Level 1	287 (80.6%)
		Level 2	57 (16.0%)
		Level 3	12 (3.4%)
		Level 4	0 (0%)

More results

- Science: Better in open-ended questions
- Chinese: Growth in vocabularies
- Mathematics: Weaker students progress to the level of stronger students
- English: Stronger perception on critical thinking, creative thinking, oral communication (P2)
